2.3.2 Teachers use ICT enabled tools including online resources or effective teaching and learning process

Teachers are using ICT enabled tool "Microsoft Teams" for effective teaching and learning process. Microsoft Teams is a persistent chat-based collaboration platform with document sharing, online meetings, and many more extremely useful features for business communications.

Microsoft Teams features make it stand out from other collaboration software as follows:

- **Teams and channels:** Teams are made up of channels, which are conversation boards between teammates.
- **Conversations within channels and teams:** All team members can view and add different conversations in the General channel and can use a @ function to invite other members to different conversations, not unlike Slack.
- A chat function: The basic chat function is commonly found within most collaboration apps and can take place between teams, groups, and individuals.
- **Document storage in SharePoint:** Every team who uses Microsoft Teams will have a site in SharePoint Online, which will contain a default document library folder. All files shared across all conversations will automatically save to this folder. Permissions and security options can also be customized for sensitive information.
- Online video calling and screen sharing: Seamless and fast video calls to employees are possible.
- **Online meetings:** This feature can help to enhance communications, company-wide meetings, and even training with online meetings that can host up to 10,000 users. Online meetings can include anyone outside or inside organization.
- Audio conferencing: With audio conferencing, anyone can join an online meeting via phone.
- Full telephony: Microsoft 365 Business Voice can completely replace existing phone system.

Basaveshwar Engineering College (Autonomous) using the MS Team for effective teaching and learning process. The related screenshots shows the usage of MS Team:
